EE1080/AI1110/EE2120 Probability, Quiz 5

April 10, 2025

Max. Marks: 21.   **Time:** 1 hour.

Instructions

- Please **write your roll number**, **serial number** (used for attendance) and **course id** prominently in the first page of the answer sheet.

- No laptops, mobile devices etc. allowed.

- please write supporting arguments for any of the statements you make. any result proved in the lectures can be used by stating it clearly, no need to prove them in your answer.

CDF of standard normal R.V is provided at the back of this sheet.

1. *Concentration Inequalities (7 marks = 1+2+2+2)* From past experience, a professor knows that the test score of a student taking her final examination is a random variable with mean 75.

    (a) Given an upper bound for the probability that a student's test score will exceed 85.

    (b) Suppose in addition, professor knows that variance of students test scores is 25. What is the probability that the student scores between 65 and 85?

    (c) How many students would have to take the examination to ensure with probability at least 0.9 that the class average would be within 5 of 75 ? (do not use central limit theorem)

    (d) What would the answer be on using central limit theorem for the earlier part ?

2. *Concentration Inequalities (7 marks = 1+2+4)* Let X be a normal random variable with mean 4 and variance 4. Find $P(X > 7)$ using the CDF table of standard normal random variable ?

    (a) Find an upper bound on $P(X > 7)$ using chebyshev inequality.

    (b) Find an upper bound on $P(X > 7)$ using Chernoff bound.

    Hint: $M_Z(s) = e^{\frac{s^2}{2}}$ *for a standard normal R.V* Z.

3. *Convergence (7 marks = 2+3+1+1)* Let X_n be normal random variable with mean 0 and variance $N(0, \frac{1}{n^2})$. Does X_n converge to 0,

    (a) in probability sense ?

    (b) in almost sure sense ?

    (c) in mean square sense ?

    (d) in distribution ?

Table 1: Shown below are the values of $\Phi(z) = \int_{-\infty}^{z} \frac{1}{\sqrt{2\pi}} e^{-x^2/2} dx$. First row implies $\phi(0) = 0.5$, $\phi(0.01) = 0.50399$, $\cdots$. Second row implies $\phi(0.1) = 0.53983$, $\phi(0.11) = 0.54380$, $\cdots$
