B. Answer the following in 3-4 sentences. (4M x 3)

1. Is the Pan American smile useful in any situations? Explain.

Ans. The Pan American smile is like a fake display of happiness, but is a welcoming gesture. It is useful in situations where politeness or courtesy is important / takes centre stage, even genuineness. It helps in maintaining a welcome & professional environment. It is widely used by Air hostesses when greeting passengers, making them feel slightly more comfortable than they would, had they not been greeted with a smile.

2. Mention two obstacles to experiencing or expressing gratitude?

Ans. Two obstacles to experiencing or expressing gratitude are:

(i). A feeling of entitlement. In this condition, one feels they are owed / deserve favours from others, without the need to acknowledge / reciprocate it.

(ii). The inability to accept favours / help. It may make the person feel put down / that they are dependent on the person offering the favour. They feel inferior while accepting help, so try to avoid it & don't feel grateful. (find it hard to)

(iii). Habituation. If the person gets used to obtaining favours from the other one, they may get so used to it, that they don't feel the need to explicitly thank them.

3. Cite examples of two situations where defensive pessimism is expected to work better than optimism.

Ans. (i). One example may be a situation when a person hasn't prepared well for an exam & only has, say, an hour left. The defensive pessimistic person would fear failing & try studying something till the last minute. They may not have much hope of doing good even when writing the exam, but still try to give their best at whatever questions they know. An optimistic person, would hope for the best & may think that the part they haven't studied would not come. & even if it did, they would manage it. This may not work out well in reality & may even be counterproductive.

(ii). Another example may be, when meeting a new person, an optimist may assume the best of that person & the interaction & go all in, without a second thought about their action & what they share with them. However, a defensive pessimist would think multiple times about what the worst case scenario might be in the interaction, & proceed carefully, analyzing the person & the situation, to prevent the worst from happening & at least try to make the conversation go well.
